peptide analogues and antagonists.

```
The present invention describes a library of human polynucleotides CC comprising the sequences given in AR212532 to AR217779. Also described is CC a method of detecting differentially expressed genes correlated with the CC cancerous state of a mammalian cell, comprising detecting at least one CC differentially expressed gene product in a test sample from a cell csuspected of being cancerous, where the gene product is encoded by one CC polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, CC mapping, tissue typing or profiling, forensics, genetic analysis and CC detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and CC arrays for diagnostics (which may be used to determine function of a arrays for diagnostics (which may be used to determine function of a cenoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to CC identify a genetic predisposition or susceptibility to a disease such as CC cancer). The polynucleotides of the invention are especially used in the CC and lung cancer. The polynucleotides can also be used to screen for contribute analogues and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      24-FEB-1998;

RESULT 9
AAX02974
AAX02956-X03048 and AAX22301-X22304 are overlapping BAC genomic sequences containing alternatively spliced forms of human IL-Ira. Such fragments are used in the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleic acid and protein Tango-77 is a member of the cytokine superfamily that is expected to inhibit inflammation by binding to the interleukin-1 receptor (IL-IR). may also bind to a new receptor so could regulate other cellular processes associated with acute or chronic inflammation, e.g. asthma, chronic myelogenous leukaemma, rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tango-77; human; IL-Ira; cytokine superfamily; inflammation; inhibition; interleukin-1 receptor; IL-IR; regulation; asthma; rheumatoid arthritis; chronic myelogenous leukaemia; psoriasis; inflammatory bowel disease; growth factors; treatment; IL-1 receptor complex; BAC; ss.
                                                                                                                                                                                              Example 5; Figure 3; 226pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             inflammatory bowel disease. It may also induce or suppress interleukins, cytokines and growth factors. Modulators of this protein are used to treat or prevent conditions associated with abnormal levels of inflammation, or activity of IL-1 or its receptor complex.

This is a nucleotide sequence of the stabilising sequence-encoding consert. The invention provides a method for increasing the resistance core protein to proteolytic degradation that comprises linking or conserving onto or into the core protein a stabilising polypeptide of coroula ((Glya)X(Glyb)Y(Glyc)ZIn where Glya, Glyb, Glyc are 1-6 coroula (Glya)X(Glyb)Y(Glyc)ZIn where Glya, Glyb, Glyc are 1-6 coroula (Glya)X(Glyb)Y(Glyc)ZIn where Glya, Glyb, Glyc are 1-6 coroula (Glya)X(Glyb)Y(Glyc)ZIn where Glya, Glyb, Glyc are 1-6 coroula (Glya)X(Glyb)X(Glyc)ZIn where Glya, Glyb, Glyc are 1-6 coroula (Glya)X(Glyb)X(Glyb)X(Glyc)ZIn where Glya, Glyb, G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a peptide sequence containing glycine repeats

                                                                                                                                                                                                                                                                                                                                                CC (EBV) nuclear antigen protein 1 (EBNA), see AAY9556). EBNA1 is CC (EBV) nuclear antigen protein 1 (EBNA1, see AAY9556). EBNA1 is CC utilised in a novel method for obtaining a eukaryotic cell that is CC stably transfected with at least one episome. This method involves CC transfecting a eukaryotic cell with: (1) a first episome comprising CC is protein whose expression results in cell death and a selectable marker for eukaryotic cells; and (2) a second episome CC expression of the second protein prohibits the occurrence of cell CC death resulting from expression of the first protein to produce doubly transfected cells which also express an antigen that CC first and second proteins and the selective pressure specified by the marker are expressed, CC inst and second proteins and the selective pressure specified by the marker are expressed, CC and the selective pressure specified by the marker are expressed, CC inst and second proteins and the selective prossure specified by the marker are expressed, CC protein of interest from the other episome. Either or both episomes in which the selection desired to be expressed from 1 of the episomes, and the CC protein), a nucleic acid encoding an RNA that is not intended to be translated (e.g. a therapeutic RNA), or a DNA sequence used as CC a tag for the Cells. The method is applicable to cell culture or interest, using a novel method of selection, and complete acid encoding and reliably express CC a gene to finterest, using a novel method of selection, and complete acid encoding and complicable to cell culture or companions, for gene therapy. It allows the rapid complete acid encoding and complete compliance of that selection without the need for exogenous

The invention provides a composition comprising nucleic acid, histone HI protein and expression vector operationally encoding a protein suitable for tethering the nucleic acid to the histone HI protein, where the tethering protein is LANA. The composition is useful in aiding the retention of the viral DNA in the host cell. The viral vector encodes a protein suitable for tethering DNA to Histone HI. Methods for screening for compounds which are agonistic or antagonistic for the tethering of viral proteins to histone HI and DNA binding sites are useful for developing the method of viral transfer. The composition has applications to gene therapy, including the treatment of multiple sclerosis,

It is used to produce bait vectors of the invention. The specification describes a compositions and methods for a genetic system of detecting protein-protein interactions in a mammalian host cell. The system comprises bait and test, both containing selection genes, and viral origin of replications which require bound viral replication proteins to effect replication. The compositions is useful for detecting an interaction between a bait protein and a test protein. It is useful in

EBNA 1 protein is used to stably maintain episomes containing EBV origin of replication (orip) and a gene encoding protein or RNA of interest. Eucaryotic host cells expressing EBNA 1 protein are transfected with these episomes to produce recombinant cell lines expressing multiple genes of interest. This provides a rapid and reliable method of stably expressing multiple genes in transfected cells. The episomes are useful in the transfection of genes encoding receptors, transporter proteins, ion channels, adhesion molecules and transcription factors. The episomes carrying desired genes can also be used to transfect cells in gene therapy, antisense therapy, for gene smallficiation cell immortalisation at the carry antisense therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel method for generating an antisense library targeted to a selected RNA transcript. The methods can be used for identifying antisense agents and for identifying target sites for antisense-mediated inhibition of a selected gene. The use of a direct library for target site selection significantly simplifies the screening process, since only very small libraries need be prepared and assayed. This sequence represents the vector pShuttle which is used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1866 CTCCTGCCCTGCTGCTCCTGCTCCTCCTCCTCCTCCTGC 1917

Plate: LLAM11720 row: j column: 16
High quality sequence stop: 739.
Location/Qualifiers BI544702 843 bp mRNA linear EST 05-SEP-2001 603242661F1 NIH_MGC_95 Homo sapiens cDNA clone IMAGE:5285103 5', mRNA sequence. Email: cgapbs-r@mail.nih.gov
Tissue Procurement: Miklos Falkovits, M.D., Ph.D.
cDNA Library Preparation: Michael J. Brownstein (NHGRI), Shiraki
Toshiyuki and Piero Carninci (RIKEN)
cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Incyte Genomics, Inc.
Clone distribution: MGC clone distribution information can be Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
